Classification: report

Sentiment: neutral

Department: Management

Sensitivity: confidential

Routing tag: auto-approved

Summary

This document outlines the security procedures and guidelines for information systems within smart grid operations to protect against cyber threats. It covers essential practices including access control, data encryption, patch management, and incident response to ensure operational continuity and regulatory compliance.

Action items

Implement robust access control and role-based access control (RBAC), Encrypt sensitive data both at rest and in transit, Regularly apply security patches to systems and firmware, Deploy firewalls and intrusion detection/prevention systems, Develop and maintain a cybersecurity incident response plan, Provide ongoing security awareness training to all personnel, Conduct regular security assessments, penetration testing, and vulnerability assessments, Implement continuous monitoring using SIEM tools
